

Churn Analysis Summary

Overall: About **1 in 4 customers (26.5%)** have churned.

Main reasons customers leave:

- **Contract type:** Month-to-month customers churn the most (**43%**), vs. just **3%** for two-year contracts.
- **Early tenure:** Most churn happens in the **first few months** — customers who stay past that tend to stay long-term.
- **Fiber internet:** Fiber customers churn more (**42%**) than DSL users (**19%**).
- **No add-on services:** Customers without Online Security or Tech Support churn about **2–3x more** than those who have them.
- **Payment method:** Electronic check users churn the most (**45%**), while automatic payments (bank/card) have the lowest churn (**~15–17%**).
- **Senior citizens:** Churn almost **double** that of younger customers (**42% vs 24%**).
- **Streaming & gender:** Barely make a difference — not major factors.

Recommendations

1. **Push longer contracts** — offer discounts to move customers from monthly to yearly plans.
2. **Improve early onboarding** — most drop-offs happen in the first 2–3 months, so focus retention efforts there.
3. **Check fiber service quality/pricing** — high churn despite being a premium product.
4. **Promote security & support add-ons** — bundle them to increase stickiness.
5. **Encourage automatic payments** — shift users away from electronic checks.
6. **Create senior-focused retention plans** — this group churns notably more.
